Two One-Sided Tests Equivalence Testing: Text Summary

The equivalence test was significant, $Z = -5.837$, $p = 0.00000000266$, given equivalence bounds of -0.500 and 0.500 and an alpha of 0.05 . The null hypothesis test was significant, $Z = 7.278$, $p = 0.00000000000338$, given an alpha of 0.05 . Based on the equivalence test and the null-hypothesis test combined, we can conclude that the observed effect is statistically different from zero
